signorum contra recte in gra. 14 mi. 36 = deueni. Cui summa 90 in super gradus adiciens iterum in Zodiaco ad 14 gra. 36 mi. delatus sum, locum eum quem scire institueram.

DE CONSEQVITA ANGVLI QVANTITATE ILLIUS, qui in 14 to gra. & 36 mi. = fit, sicut ex aduerso in ariete, nihilq; aliud quam 90 mi. gradus ab ascendente altitudinem exhibet. Caput Septimum.

Um constaret ex premissis iam arcus ille quantus foret à puncto eclipticæ occiduo & interfectione, tum meridiani tū horizontis ex parte australi, eundē in meteoroscopia illico resumpti, erat autē gra. 81 m̄ 15 ab A cōtra C eundo, resumptumq; G litera in scripsi, à litera G sursum versus B. Denuo altitudinem eclipticæ meridianā, quæ fuit gr. 17 m̄ 59 numeravi, finemq; numeri huius F litera insigniui, per punctū deinde F filum directū in limbo B C indicare punctū K videbatur, distās à C gr. 18 mi. 16, hæc est autē altitudo 90 m̄ gra. supra horizon tem includens angulum eclipticæ & horizontis, tā orientis quā occidentis parte. Licet autē alia quoq; via angulus iste haberi quæat, breuitati tamē consulens plura agere nolo, nihil enim dubito quin per temet & reliquos demonstrandi modos ex hiis facile consequaris.

DE DECLINATIONE GRADVS ECLIPTICI de fcedēte, per interuallū sui occasus reperta, Caput Octauū

nteruallū siue amplitudinē gra. ecliptici illius qui occidebat obseruationis nostræ tēpore caput sextū declarauit, gra. scz 8 m̄ 45 meridionalē fuisse. Hæc numeratā ab A versus B cum L litera margaritaq; connecto, ab hoc autē altitudinē æquatoris In golstadiani quæ in limbo gra. 41 m̄ 20 habuit, cōspicio. Per eū vero locum filo transmissio vnio iuxta punctum F gra. 5 m̄ 46 quæsiit vcz puncti declinationē arguit. His igitur paucis prælibatū volo qua methodo ad Cometæ obseruationē instruetur accesserim. ¶ Nūc quomodo cū Cometa ipso trāsēgerim cognoscetur. Obseruatio autē prima nobis peracta est 13 Augusti die, hora 8, m̄ 22 ferē pomeridianis, nō ita multo post Solis occasum.

DE OBSERVATIONE NVNC COMETÆ ipsius primi Caput Nonum.

Acto iā Solis occasu cū cometa verticali circulo videretur esse propinquior, instrumentū capiens vocatū planimetrum, primo Bootē cōtueri capī, vtrum vcz is in verticali circulo esset, nec ne. Vcz cum ille exactē verticalē tenere appareret, regulam eūdem idē Cometa versus dirigēs, eiusdē Azimuth ab occasu altitudinemq; supra horizon tē exquirere studui. Quo peracto, caudā quoq; eodē instrumēto suspicēs in eius extremitate punctū quoddā imaginabar, simulac cōtēplando quātum ab occasu differret septentrionalior, quātāq; ei esset supra horizon tē eleuatio. Hæc autē tota mæ obseruatiōis ratio erat, ex qua ea quæ sequūtur sese obtulerūt.

- ¶ Altitudo Cometæ supra horizon tē gra. 7 mi. 56
- ¶ Azimuth Cometæ ab occasu versus Sept: gra. 49 mi. 26
- ¶ Altitudo Extremitatis caudæ supra horizon tē gra. 20 m̄ 3
- ¶ Azimuth extremitatis caudæ occidentale & septentrionale cō 59

¶ Fateor tamen interim me ante Solis ortum non cometā hunc cōsiderasse, atque hoc ideo, quod 13 iam die mensis Augusti/ quo primum à me obseruaretur, non amplius matutinum ante ortum visus sit, qualis à principio soluit. Occultationis autem causā in sequentibus planissime discetur, idcirco prius consilium sequutus singulas obseruationum partes capitatim recensere malo.

QVOMODO DISTANTIA COMETÆ à puncto occidentis eclipticæ, nec non angulus ab hoc arcu in horizon tē causatus principio inquisita sint. Caput Decimū

Extum Caput demonstrauit obseruationis hora 14 gra. 36 mi. = occidentem occupasse, à quo puncto distare Cometā verē deprehensus, ad interuallum gradus occidentis quod fuit 8 gra. 45 m̄, Azimuth Cometæ 49 gr. 26 mi. iungo, summamq; gra. 58 mi. 11 constitutam, post in meteoroscopia ab A versus C requisitam cū G litera noto, à quo procedens seorsum B accedēdo per 7 gra. 56 mi. id quod Cometæ altitudo fuerat per literam F signo. Per eam vero literam dimittens filum, sectionem eiusdem in limbo iuxta E obseruo, margaritamq; in F colloco. Postremo filum in A B linea donec H punctum vnio teneat, promouens, punctum illud H distantiam Cometæ verā ab occasu puncto referre pronuncio. Quantitatē similiter anguli accipiens eā, quā arcus ille distatiæ modo repertæ cū horizon tē creat, arcum limbi G E cōsiderās gra. illius 9 m̄. 19 esse cōspitio.

DE VERO COMETÆ LOCO IN ECLIPTICA secundum lōgitudinē cōstituti, Similiter de latitudine eiusdem cognitis. Caput 11.

Ræcedēs caput angulū indagauit eū quē arcus inter cometā & gra. eclipticæ occidentali cōstitēs vna cū finitōre efficit, gra. vcz 9 m̄ 19. Septimo etiā ostēsus est angulus eclipticæ & horizon tē, nempe cō 18 m̄ 16. Quos ambos nūc cōnectenti sumā gr. 27 m̄ 35 cōsurgit. Hæc summā in meteoroscopia limbo iterans à C ordiendo ad E q; procedēdo, per idē E filū tendo, margarita vero cū prius iā in linea A B distatiā cometæ gr. 58 m̄ 31 teneat, eadē in puncto F gr. 23 m̄ 15 distatiā cometæ ab ecliptica, quæ & latitudo dicatur borealis, docet. Eodē in circulo ad G vsq; descēdēs inter A & G 63 cō 51 mi ostēdo, quæ distatiā est cometæ à 14 gr. 36 mi. =. Quos gra. & m̄ postq; in Zodiaci successum signorū cōtra numero 19 leonis gra. m̄ 15 incidēs, vcz eum Cometæ locū in ecliptica esse pronuncio. At hoc interpretādum est secundū visus nostri lineā, aspectus enim diuersitas quanta causetur breuitatis huiusmodi non est in præfens discutere.

DE COMETÆ DECLINATIONE ascensionēq; recta obtentis. Caput 12

Obseruatio prima docuit, veluti Cometa 49 cō 26 m̄ Azimuth ab occasu septentrionem versus distiterit. In altitudine vero gra. 7 mi 56. Ideo 49 gr. 26 m̄ ab A contra C numeranda erant, horumq; finis cum G signandus. Iterum autem à G versus B ascendenti per gradus 7 m̄ 56 litera F ponenda fuit, huicq; filum cum margarita rectē ordinata super inducendum, quæ fili extensio in limbo quantitatem anguli horizon tē & ortus à cometa ad occasum æquinoctialis ducti ostēderat, hoc est, gra. 10 mi. 24. Post hæc filum in A B posito margarita gr. 49 mi. 54 in puncto
