Huc referatur, in usum præcipue Nautarum Oceanum navigantium, Mappa orbis universalis, ex disco circulari & duobus semicircularibus constans, quam adorno. In eâ meridianus primarius est harum Tabularum proprius: cæteri, horis integris versus occidentem distantes, notam habent S. qui verò versus orientem, notam A.

De Locis Meridiano harum Tabularum subjectis.

Quantum sit incertitudinis, quantum laboris, in examinandis Locorum longitudinibus; lubet unico exemplo docere, ex media Europa petito. Inter ROMAM & NORIBERGAM Regiomontani ætate censebantur Minuta 36. Regiom. Primi mob. probl. 45. Wernerus habet 32: ex principio tamen Eclipsis anni 1497. 18. Januarij, utrobique observato, Romæ quidem ab ipso H. 5°. 24'. Noribergæ à nescio quo H. 4°. 52'; colliguntur Mi. 28'. Apianus in Astro-labio inter Regiomontanum & Wernerum, medium sibi censuit eligendum 34'. Mæstlinus tamen, & Everardus & Origanus Wernerum propius tenent, statuantes 33'. At Stöfler in Calendario, non attentâ Wernerii observatione, statuit 18': quem videtur secutus Apianus posteriùs in Cæsareo, statuens 19'. Et Maginus medium elegit inter Apiani priorem & Stöfleri traditionem, statuens 26'. Schonerus in Resolutis habet tantum 12'; quod observant Mercator & Hondius in Mappis. Stadius in Ephemeridd. habet 13'. Janfonius in Mappa universali, ad 10' descendisse videtur. Ego potius observationibus Eclipsium Lunæ duabus, Romæ habitis, ex annis 1616. 1617. quas & ego observavi Lincij, consensu fidens, Lincium Romæ orientalius facio 10' Mi. quantum & Uraniburgo, per obsalias. Ita mihi Roma & Uraniburgum sub eundem veniunt Meridianum, qui Noribergensi non plus quam 4' Min. est orientior. Con-nexionem ejus cum Alexandrino, &c. vide in Præceptis.
