Profunditas Solis sub Horizonte in Articulis Emerfionum vespertinarum, et occultationum matutinarum VENERIS, secundum PTOLEMÆVM, est 5. In occultationibus vespertinis et Emerfionibus matutinis minor; etfi tunc, ♀, ut Luna, lumine diminuitur. Adeoque interdum ♀ biduo aut triduo simul mane et vesperti conspicitur, prius emergens mane, quam vesperti occultetur. Ita et hoc illa singulare habet, præ Planetis reliquis, et commune cum Luna, ut circa maximas elongationes nonnullas, nulla illi profunditate Solis sub Horizonte sit opus, quin se conspicendam præbeat, etiam interdum per Horas aliquot.
