quàm à centro terreni orbis. Quæ diuerſitas in ♄ maxima eſt: propterea quòd integra Telluris ἐκκεντρότης eius diſtantiæ accedit. In Ioue autem parum mutatur, quia is, non vt Saturnus è regione Solis fit altiſsimus, ſed in ♎, vbi ferè æqualiter abeſt ab vtroque centro Solis & Orbis magni. Atque inde etiam ad oculum patet demonſtratio eius, quòd Copernicus lib. 5. Reuol. cap. 4. 16. & 22. ſub finem, de mutabili Eccentricitate Martis & Veneris ad mutationem terrenæ, breuiſsimis verbis innuit: Rheticus verò in ſua Narratione copioſiùs perſequitur. Aliud etiam eſt, cuius nos iſthæc tabula admonet, quod quia commodiùs alio loco dici poteſt, nunc differam. Nunc ad rem. Pandam autem quadruplicem ordinem numerorum. In primo erunt Planetarum abſceſſus à centro magni Orbis: ſicut ij abſceſſus & numeri ex Copernico & prutenicis ſimpliciter & ſine mutatione eliciuntur. In Secundo erunt abſceſſus orbium à Centro Solis, qui proueniunt ex Copernico poſt illam reſolutionem numerorum, de qua modo vidiſti tabulam. In tertio & quarto venient rurſum abſceſſus planetarum à ☉, prout illi per interpoſitionem corporum mutati ſunt. Et tertius quidem ordo erit ex ſtructura mundi ea, quæ pro fundamento habebit orbis terreni craſsitiem ſimplicem, non accẽſito ſyſtemate Lunari. Quartus denique prodet craſsitiem orbis terreni tantam, quæ ſuprà & infrà ſemidiametrum orbis Lunaris contegere poſsit.
