Hæ distantia. Iam porrò subiungam laterculum arcuum, quî sinibus debentur ijs, quos efficiunt Veneris quidem & Mercurij altissimi abscessus, si media terræ distantia sit sinus totus: Telluris verò media distantia, si superiorum abscessus longissimi sint sinus totus: quorum arcuum illi quidem elongationibus maximis Veneris & Mercurij à Sole, hi verò prosthaphæresibus ἀπογείοις Saturni Iouis & Martis proximi erunt. In primo ordine sunt arcus, qui proueniunt ex corporibus exclusâ Lunâ, in secundo arcus, qui proueniunt ex distantijs à Sole Copernicanis, in tertio denique, arcus qui ex corporibus, adiunctâ Telluri Lunâ sequuntur; Et interponentur vtrinque differentia.

## CAPVT XVI.

*De Luna peculiare monitum, & de materia corporum & orbium.*

**N**ON ergo exiguum scrupulû Lunæ Orbis, vtut exiguus sit, mouet. Quare porrò de Luna tempus est, vt aliquid dicam. Et incipio quidem sine ambage, tibi Lector, sincerè meam mentem exponere; secuturum nempe me in hac causa, quocunq; propinquitas numerorum præit. Vt si interpositio Lunæ numeros & arcus Copernici veriùs reddit: dicam accensendum illud systema crassitie orbis magni. Sin autem eiectâ Lunâ melius nobis cum Copernico conuenire potest: etiam ego dicam, orbem magnum non tam crassum esse circumcirca, vt cælum Lunare tegat: sed eminere interdum sursum, interdum deorsum, integrum Lunæ hemisphærium supra vel infra margines orbis magni, interdum & plerunq; quidem minus hæmisphærio extare; omnino prout ipsum corpus telluris
