hic agi posset. Sumeretur proportio eccentrica ad distantiam medium à ☽ pro certa, ut quia in Copernico distantia (sicut vides in tab. V. Cap. XV.) longissima est 488. breuissima 231. media igitur erit 360. & crassities tota 257. Hæc iam crassities corrigeretur proportionaliter, vt quia circulus octaedri pro 488. numero Copernicil largitur non plus 474. ergo crassities erit in hac proportione 250. & media correcta distantia 349. Iam vide, quid orbis in Octaedro admittat, scilicet 387. Differentia igitur inter 387. altissimam orbis, & 349. medium est 38. & duplum 76. crassities orbis ad modum cæterorum, maior quidem adhuc quam Veneris, sed tamē non ita immanis. Reliqua differentia inter altissimam orbis 387. & altissimam circuli 474. quæ est 87. debetur peculiari exorbitationi Mercurij. Hoc επιχειρημα an abiciendum, an conciliandum cum ἀποθέτῳ forma motuum in ☽, an noua motuum ratio constituenda, considerent Artifices. Nec enim ita bene exploratis sunt errores huius sideris, vt eius orbis correctione non egeat.

CAPUT XVIII.

*De discordia προσταφαιστον ex corporibus à Copernicanis in genere,
& de Astronomia subtilitate.*

VPRA cap. XIII. & XV. cum alicuius propè falsitatis teneri viderer indicio distantiarum, quas Copernicus diuersas ab his figuralibus prodidit: prouocauimus ad προσταφαιστον απογείων: neq; condemnationem deprecatus sum, si meæ à Copernicanis aliquantum recederent. Atqui postquam sub finem X V. capituli arcus similes, προσταφαιστον ex elongationibus à Sole, veluti testes coram hoc iudicio stiti: visi sunt illi contra me deponere. Nullus enim Planetary fuit, qui tributum à Copernico arcum retineret. Saturno ademi 4°. Ioui 6°. Marti apposui 3°. Veneri verò immane quantum dempsi 2 gr. 18', & Mercurio 6°. Existimabunt igitur qui exactius omnia examinare volunt, quia non ad vnguem consentiat calculus corporum cum placitis Copernici, cumque eius numeris, omnem operam à me lusam esse. Quod nisi contræcepero, me apte
