Cometas obscuro, sed potius Phenomena extra aërem in ipso Cælo existentia. Quod idem mora Cometarum supra Horizontem evincit. Caterum Cometas nihil aliud esse, quam atmosphæram quandam, h. e. laxam congeriem molecularum crassiuscularum ex corporibus mundanis, & imprimis ex Sole, effluviis instar egredientium, quæ hinc inde per Cælum dispersæ aliquando propriis coeunt, ut radios Solis conjunctim reflectere possint, tum ex obscuritate luminis, tum ex confusâ eorum perimetro, quâ nubium rationem ad amissum referunt, clarè satis intelligitur.

## SECT. II.

De Mundo secundum Formam &  
Dispositionem partium suarum spectato.

## CAP. I.

## DE SITU.

## I.

De Sphærâ mundi Trinunâ, deque  
ejus Amplitudine.

## §. I.

Um ex quovis loco Terræ Sidera, præsertim fixa, in oppositis plagis observata sub eadem magnitudine & distantia inter se constanter appareant, fieri nequit, quin Terra, saltem ad sensum, in medio Corporum mundanorum, adeoque totius Mundi, consistat.

§. 2. Sicut autem congeries Stellarum ex Terrâ, quam circumstat, visâ, velut aciem orbicularem refert, unde Cælum in Sphærâ concavæ modum Terricolis adparet; ita Stellarum agmen extrinsecus quoque se componere in rotunditatem, ipsumque ad eò Mundum esse Sphæram, cui Terra centrum, saltem ad sensum largiatur, ex ratione Motuum supponimus.

§. 3. Licet autem una quoad rem sit SPHÆRA MUNDI, doctrinæ tamen gratia quasi *trinunam* concipere discentem oportet, & primò quidem seorsim concipienda se sistit Sphæram

Mundi
